Curtis Institute of Music, with its high standards for acoustics, required an unusually quiet HVAC system for its new LEED-certified Lenfest Hall, a music education and student residence building located in Philadelphia. Lenfest Hall is being constructed on a 15,000 SF parcel of land that currently has two designated historical buildings, and will consist of teaching studios and rehearsal spaces, as well as provide housing for students.

Beginning with the early budgeting stages, Burns Mechanical worked with Intech through the final design, to provide the prestigious music academy with HVAC systems that include chillers, towers, air handlers, pumps, boilers, an energy recovery unit, and makeup air units.

Burns Mechanical's work for this project begins in October 2009, and is slated to be completed by March 2011.
